The Technology Advisory Committee (TAC) met once in the spring 2008 semester. The members present were Ken Martin, Ben Widner, Renee Brown, Carlo Mora, Kerry Alt, Paul Hamilton, and Jennifer Kreie.

For a list of servers and standard builds please contact Paul Hamilton.

Topics covered at the April 25, 2008 meeting:

- The committee drafted a list of the software installed in a “standard” build for the BC computer lab and classrooms.

- When should the college move to a new operating system? After some discussion, the consensus was that it is too soon. There are concerns about bugs that need to be fixed and the need to purchase new software licenses.

- Paul Hamilton reported on these items:
  - The terminal server is now available for testing.
  - Sixty new computers have been purchased to replace machines in the BC lab. (This purchase was one item in a to-be-purchased list developed by the TAC in the fall of 2007.)
  - Some equipment needs to be replaced.

TAC committee members are volunteers. If you want to be included in these meetings, please email me jkreie@nmsu.edu or ask someone else on the committee to let you know when the next meeting is scheduled.
